

FRESHMAN EMMANUELLA EBITIMI

RECYCLE, RENEW, AND REBIRTH.

Recycling, according to the Oxford Advanced Learners Dictionary (10th Edition), means treating used materials to be reused. Rebirth, on the other hand, means a period of new life, growth, or activity. Renew means to change something used or damaged to a new thing. The words recycle, renew, and rebirth (the 3Rs) work together because without recycling, we cannot renew and without renewing, we cannot rebirth to other new things.

Today, there are so many waste materials that can be recycled, examples include plastic, leather, and metal scraps.

My main focus would be on plastic and leather which are the major waste products in my country. When used, they are dumped anywhere, which is unhygienic. Plastics are widely used in production companies for packaging goods. Modern research investigates new products daily, to cope with the world demand for plastic products.

In our school, we carried out experiment with plastics to produce tiles with an excellent result. The process involved melting, shaping, and designing them into different sizes of tiles. We utilized plastics in producing beneficial products for the country at large. Our tiles and interlocks are highly patronized in our country. This is what I call “**REBIRTH**”.
