

## Save Nature!

Nature is the memory of how the earth started with beautiful trees to soothing oceans. Nature is our environment and we have to keep it safe, so in this essay I will give you interesting reasons to save and recreate our wonderful environment.

Firstly, our earth could be destroyed with smoke, ashes, cutting down trees and much more. Nature shapes our world, without it there could be no world for us to live in. If we don't save nature there will be no food to eat because animals won't have a place to live.

Also, nature provides us clean air to breathe without that we would become sick easily. Another is, without nature all of our crops could die from unhealthy air.

In addition, healthy ecosystems can mitigate/reduce the damage of natural disasters. An intact ecosystems can stop disease from spreading badly.

Another is, fit ecosystems have predators and parasites to stop pests.

Finally, a vast number of medicines come from nature.

In summary, stop throwing plastic bottles and cutting down trees, try to create a beautiful and wonderfully made world.
