

GENERATION RESTORATION: SHAPING OUR FUTURE!

Our future lies in our hands just like the common saying goes, what will do now determines how our future will be. Therefore, starting early to put into consideration of our actions now can help our present generation to be restored of its lost nature thereby building a sustainable world. Nature can be restored by putting into consideration solutions to our climate challenges, environmental threat and how the ecosystem can be restored.

Climate challenges are the various problems be it economic (like damage to infrastructure from floods), social (food insecurity due to crop failures), environmental (extreme weather conditions of droughts) caused or worsened by climate change.

Solutions can be proffered to these climate challenges by reduction in greenhouse gas emission, protection and planting of forest and we personally supporting climate friendly businesses and voting climate conscious leaders.

Any kind or form of environmental threat should be greatly avoided like pollutions which involves air water, land and even noise pollution.

Actionable ideas of supporting greener future includes, educating others, banning use of plastics, funding renewable energy projects, use of clean fuels for heavy industries and transport can help restore our nature there by shaping our future.
