

Poem about nature

Theme: "Generation restoration, shaping our future"

Nature the cornerstone of our existence has been facing threats due to human activities

However, a beacon of hope emerges in the form of generation restoration shaping our future,

take care of plants, plants trees (afforestation)

Insects, without them plants won't grow, some help our plants grow, they make pollination possible

Nature's beauty is multifaceted and subjective but its power to inspire, heal and connect us to something larger than ourselves is undeniable.

Plants, changing seasons, geologic formations, sights, sounds, smells, textures, shapes, patterns, waterfalls, and mountains, the beauty of nature.

The sun rises in the east and sets in the west, what a beauty!!

Did you know that the sun is approximately 4.6 billion years old formed from a cloud of dust and gas

It is incredibly large, with a diameter of about 1.4 million kilometers

The temperature of the sun is around 5,500°C

And did you know that the sun is an averaged sized star

Let me tell you facts of water

River Nile is the longest river at about 4,132 miles

The deepest lake is lake Baikal in Russia at 5,387 ft deep

Did you know that 70% of our body is water

Generation restoration shaping our future, Nature is beautiful

Thank you.
