

Restoring Earth, Restoring Hope

A large portion of earth's population activities are causing a negative environmental impact in the form of earth's wildlife degradation, water pollution, environmental degradation, greenhouse gas emissions, climate change etc. The "Generation Restoration" calls upon the youth across the globe to start taking important measures in the preservation of earth's wildlife for the future. Restoration is covering a continent with trees; it is the revitalization of ecosystems, reduction of environmental harmful activities, ocean-cleaning activities, etc.

Access to the latest technologies and social media gives the young people a powerful opportunity to share with the world sustainable practices, to fund technological developments, and to create awareness. The use of internet, recycling, lowering the demand for water, and lowering the demand for plastic, are some ways to make a huge change in environment. There is no denying the fact that even the governments and the communities have an impact, as they are the ones who are able to implement the measures for environmental restoration.

Creating a future requires a lot of effort and collaboration. These negative impacts can indeed be reverted and a better, safer and greener world can be achieved, if every individual of the world commits to safeguarding the environment. Generation Restoration is an initiative to inspire people across the globe to actively join in the wildlife preservation and restoration, aimed as a collective hustle.
