

GENERATIONAL RESTORATION: Shaping our future

The idea of generational restoration simply suggest or state the responsibility of today's generation to repair the damages caused by past generations to shaping and sustain a better future.

Today's world is evolving rapidly and so is the industrial sector, machines and technology has become an active influence on the industrial sector. This industrialisation is what results to environmental challenges, not to criticize the industrialisation of the world but to point out areas past generations failed to recognize and prevent from escalating like air, water and land pollution, poor waste management, deforestation and fossil fuel use. Also, climate change and its impact on communities and the ecosystem.

The youths of this generation as agent of change should create awareness, adopting habits that are favourable to the ecosystem and demanding better environmental policies. They also should be involve in community services like clean up projects, recycling, climate activism and green innovation.

Leaders should be held accountable for environmental policies and laws, renewable energy should be promoted, lastly encouraging education and community involvement to restore environmental balance for a better future for all of us.
