

Theme: GENERATION RESTORATION, SHAPING OUR FUTURE

TITLE: WRECKAGE TO RENEWAL: BUILDING A BETTER EARTH

Out of the ashes of destruction, a new generation rises—not as bystanders, but as builders of a better Earth.

Our planet is not silent, it bears the fingerprints of every action we take.

Forests are disappearing, oceans are choking with plastic and temperatures are rising rapidly - and behind each loss is a human decision.

However, just as our choices have caused destruction, they can also bring restoration.

Our generation is turning this crisis into a call for restoration. They are leading environmental clubs, starting gardens and turning waste into art thereby creating sustainable technology.

They are developing green innovations, from solar powered devices to recycled building materials

For example, in Nigeria, students are turning plastic waste into eco friendly building blocks , restoring both the land and livelihood.

Nevertheless, restoration is not just an environmental task- it's a moral one.

When we heal nature, we defend the future.

When we act today, we gift tomorrow - creating jobs, improving food security and protecting homes from disaster.

In conclusion, we are the generation of renewal, what we build or neglect now will echo through time. We don't need to wait for the leaders, we are the leaders.

The Earth will remember us, not for what we consumed but for what we restored.
