

We are **pregnant**

Not of foetus

But of **Potentials** of a bright future

We are innovators

Making **waves**, creating **space**

In this **place** for evolution

We see the unseen, That which is behind the scene

An earth filled with beautiful scenery

A planet void of depletion of the ozone

By hydrocarbons that makes this planet a war zone

We see a bigger **picture**

Where **youths** are the CHANNELS of change

Not propellers of Climate Change

Where Gen Zs are envied for their mission to save this planet

This mission we hold with soo much **passion**

This passion we won't trade for mere **denominations**

Through Climate Action and Activism

We'll lend our Voices to dispel plastic waste

We'll be in no hesitation to stop pollution

For we know that to build a stable earth

Embracing sustainability is key

Upholding the culture of agriculture

Is paramount to prevent the earth from torture

So we'll leap over every **obstacle**

Our bold actions of Climate Justice would be testimony of our aspirations

To see the earth healed of debris and waste

For we are not just the **future** of tomorrow

But of today, we'd feature in this **fixture**

Making this Planet a beautiful **picture**
